

The GetDolt platform is the first internet portal worldwide that covers all spheres of services connected with moving. Our service is developed as an intermediate between a Customer and a Service Provider.

## How it works for a service provider

### ! Problem

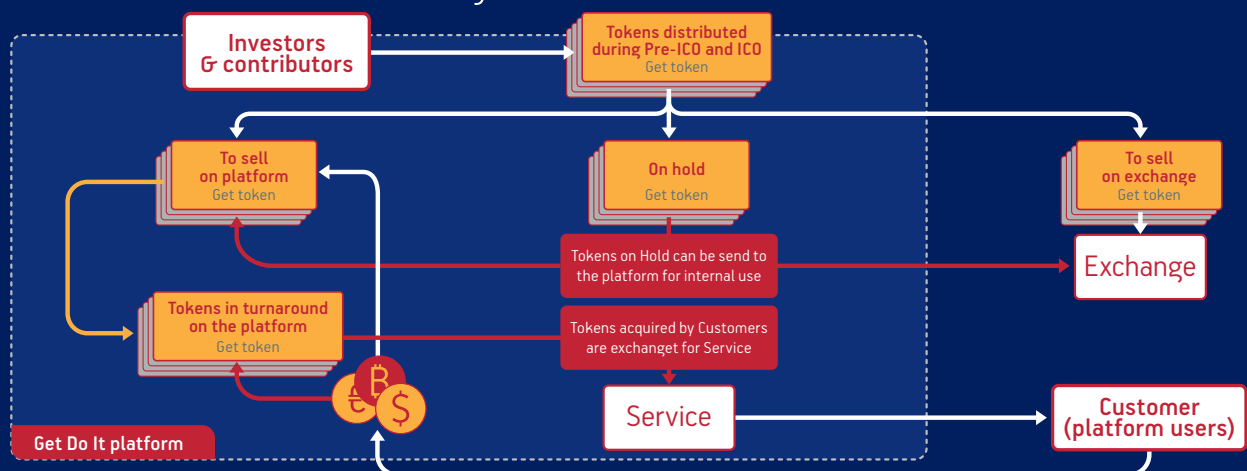

- Clients have trouble finding reliable and qualified service providers
- Customers have often to deal with fake service providers and fraud
- A Customer needs to search and compare reviews to each service provider separately, on different portals, in case the reviews exist
- A Client has to search long to find moving companies, workers, constructors, and other service providers
- The price range is enormous: a Customer often chooses a way too expensive service, having not found a better deal

### 💡 Solution

- The quality of service is controlled by the GetDolt platform via smart contracts. Rating-system and reviews of former Customers also help to keep the quality level high
- A blockchain certification system verifies and validates both Service Providers and Customers. Customer credits the balance, but the payment to the service provider is performed only after the work has been done
- Our rating-system and clients' reviews allow a Customer to find the proper Contractor easily
- Our service covers all spheres connected with movement and handiwork
- The GetDolt service allows a client to select the most suitable contractor, according to one's needs, preferences, and budget
